PART A (20 Marks)
PART B (30 Marks)
PART C (30 Marks)

2. Candidates are not allowed to bring any material to examination room except with the permission from the invigilator.

3. Please check to make sure that this examination pack consist of:
 - i. Question Paper
 - ii. Answer Booklet

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO

This examination paper consists of 10 printed pages including front page

PART A – READING COMPREHENSION (20 MARKS)

Answer **ALL** questions in Answer Booklet

Section 1

This section consists of **SIX (6)** questions.

Instruction: Read the passage below carefully and answer the questions that follow.

No. 14, Jalan Mermadia 3,
Taman Mermadia,
81100, Johor Bahru,
Johor Darul Ta'zim.

20 October 2018

The Langkasuka Council,
1999, Jalan Permai,
81100, Johor Bahru,
Johor Darul Ta'zim.

Dear Sir,

Irregular Garbage Collection

I am writing to you to inform you of the irregular collection of rubbish in our housing estate. The rubbish is collected only once or twice a week. When the rubbish bins are emptied, it is done in a very sloppy manner causing rubbish to be spilled onto the road.

The irregular collection of rubbish is posing a danger to the health of the residents. The overflowing rubbish besides giving off a foul smell, can cause illness to them. I have seen flies gathering the bins and I am very sure that if these flies come into contact with

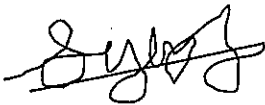

5

the food of the residents, they will fall sick. Dogs, cats and rats also come to the bins to look for food. While searching for food, **they** spill the uncollected rubbish onto the road making the whole place filthy and smelly. I am sure the spill rubbish will endanger the health of the people living here.

III Besides the irregular garbage collection, the drains are also not cleaned. As a result, many of **them** are blocked and the water becomes stagnant in them. The blocked drains not only give off a strong odour but also become breeding places for mosquitoes. If action is not taken soon, many of the residents here may become victims of malaria or dengue fever. 10

IV I hope the council will take note of what I have written and act soon. I am sure the council would not want to be held responsible for spreading diseases. Thank you. 15

Yours faithfully,

(Syarifah Salsabila bt. Syed Suhaimi)

Passage 1

1. What is the main complaint of the writer?
(2m)

2. How often is the rubbish been collected by the Town Council workers?
(1m)

3. Why are flies a danger to health? State your own opinion, other than in the passage.
(2m)

(1m)

5. Name ONE animal that go to the rubbish bins to look for food.
(2m)

6. State ONE disease that are caused by the mosquitoes
(2m)

[10 marks]

This section consists of **TEN (10)** questions.

INFORMATION TRANSFER

Instruction: Complete the table with information from the passage and write all your answers in the answer booklet provided

Obesity

1 **Obesity** is a medical condition in which excess body fat has accumulated to the extent that it may have an adverse effect on health, leading to reduced life expectancy and/or increased health problems. Body mass index (BMI), a measurement which compares weight and height, defines people as overweight (pre-obese) when their BMI is between 25 kg/m² and 30 kg/m², and obese when it is greater than 30 kg/m².

2 Obesity increases the likelihood of various diseases, particularly heart disease, type 2 diabetes, breathing difficulties during sleep, certain types of cancer, and osteoarthritis. Obesity is most commonly caused by a combination of excessive dietary calories, lack of physical activity, and genetic susceptibility, although a few cases are caused primarily by genes, endocrine disorders, medications or psychiatric illness.

3 Evidence to support the view that some obese people eat little yet gain weight due to a slow metabolism is limited; on average obese people have a greater energy expenditure than their thin counterparts due to the energy required to maintain an increased body mass.

4 The primary treatment for obesity is dieting and physical exercise. To supplement this, or in case of failure, anti-obesity drugs may be taken to reduce appetite or inhibit fat absorption. In severe cases, surgery is performed or an intragastric balloon is placed to reduce stomach volume and/or bowel length, leading to earlier satiation and reduced ability to absorb nutrients from food.

5 Obesity is a leading preventable cause of death worldwide, with increasing prevalence in adults and children, and authorities view it as one of the most serious public health problems of the 21st century. Obesity is stigmatized in much of the modern world (particularly in the Western world), though it was widely perceived as a symbol of wealth and fertility at other times in history, and still is in some parts of the world.
